

## Micro ducts

Micro ducts

### Description

Micro ducts are used for the mechanical protection of fibre optic micro cables - for direct burial or for the laying in pipe systems.

### Scope of delivery

The Micro ducts are reeled on re-usable wooden drums.

The coils are wrapped in stretch film.

Plastic caps on the ends of the ducts protect the ducts against dust and dirt penetration.

The drum core diameter is 415 mm.

The periphery width can be up to 10% bigger due to micro ducts being pressure-winded (drum width is measured from center of axis).  
winded (drum width is measured from center of axis).
