

## SUCCESS STORY

# CREEK RESIDENCE, DUBAI: FANTASTIC VIEW

In June Datwyler was awarded the contract for the cabling of six residential towers in Dubai. The communications cabling comprises over 8000 data connection points.

The high-rise buildings of the “Creek Residence” complex, located right on the Promenade, will be between 30 and 40 storeys high and will afford residents a fantastic view of the harbour and the Dubai skyline.

The cabling of the 872 residential units comprises over 8000 data connection points. By the end of this year Datwyler will have supplied this project with, among other things, around 180 kilometres of Category 6 copper data cable and over 100 kilometres of various types of fibre optic cable.

This cabling project is one of the first in the United Arab Emirates to be approved on the basis of the new Ta'awun Directive. This government initiative, launched in early 2017, combines the competences of the two telecommunications service provider companies Etisalat and DU in order to give the emirate a robust telecommunications infrastructure which will enable subscribers to choose the supplier they want.
